GUARANTEED PLANTING

Are You Interested in 90% Survival?

We will plant trees for you and guarantee you 90% survival with our own mechanical planter. Our only stipulation being that these seedlings must come from our own beds which we know will be lifted only 24 hours prior to our planting in your fields. Due to the limited planting season, we are arranging our planting schedule for this spring and would suggest you contact us as soon as possible.

For the last 5 years we have done contract planting for land owners, Strip Mining Co's. farmers and Christmas Tree Growers, and feel we have the equipment and experience to give you guaranteed planting.

Your land can yield its best profit from its poorest soil by planting Pine Seedlings.

We offer discounts on planted seedlings as follows: 5% discount on 10,000 planted seedlings, 10% discount on 25,000 planted seedlings and 15% on over 25,000 planted seedlings.

Smith's Forest Tree Nurseries

COMPLETE WHOLESALE SEEDLING PRICE LIST FOR SPRING 1955

Choice Christmas tree stock. Seeds for this stock was selected specially for Christmas tree growers who demand a green, symetrical and average growth tree. We highly recommend our

	PER 100	PER 1000

500 Seedlings billed at 1000 price.

This Price List cancels all previous Price Lists.

Orders are filled in the order they are received.. Earliest orders given priority. All orders delivered 24 hours after seedlings are lifted from our nursery.

All claims of errors must be reported upon arrival. We are not responsible for winter losses or losses due to drought.

Purchasers otherwise assume risk of transportation. All orders we do not deliver will be shipped C. O. D. which require a check in the amount of 50% of order, payable in advance.

All prices F. O. B. our nursery, Magnolia, Ohio. No spring shipments scheduled before March 10, 1955.

Use convenient order blank provided with this price list.

PLANTING GUIDE

Smith's Forest Tree Seedlings are packed in such fashion that they reach you in perfect condition. When they arrive it is best, of course, to get them into the ground as soon as you can, but it isn't necessary to drop everything and plant them at once. Dig a little trench about five or six inches deep. Place the roots of the tiny trees in the trench, spaced rather thinly, and let them lean at an angle of about forty degrees with their tops toward the sun. Cover with moist earth to within two or three inches of the top. A cool, shady spot in moist earth is ideal. If your soil is dry be careful not to water too heavily. Excessive moisture may cause them to overheat. Trees properly "heeled in" in this manner need not be planted for several days . . . but get them into the ground as soon as you conveniently can. Never let roots dry out from the time received until planted.

Planting Distances and Number of Trees Per Acre

For forest planting the trees are usually spaced four, five or six feet apart. If less than four feet apart the trees will tend to crowd each other as they approach maturity. If planted more than six feet apart the trees will have a tendency to grow "limby." For the customary spacing for forest planting the number of trees required is as follows:

4 x 4 ft. will give 2720 trees per acre. 5 x 5 ft — 1720 trees per acre, recommended spacing for Christmas Trees. 6 x 6 ft. will give 1210 trees per acre.

WHEN TO PLANT

The best time to plant is in early spring after snow disappears, just as the frost gets out of the ground. After the ground is free from frost, any time is planting time for the next several weeks.

PRUNING

Christmas tree production can be increased 50% or more by shearing. This is usually done during June after the third year from planting, on the pines. Spruce and fir varieties can be pruned anytime during the year. On the pines cut the main leader (terminal) new growth back about 10 to 12 inches. Cut the lateral growth to approximately 8 inches. Tree should be pruned to give shape of an inverted cone. A large percentage of trees will not require any pruning due to their slow growth. Trees developing 2 terminal leaders should have the poorest one cut out as soon as it develops.
